

In July, stocks traded in a similar fashion to the way they did in June. That is, they started out the month on the upside, then embarked on a pullback to the 50-day average before bouncing back and finishing the month in positive fashion. To folks who only look at senior index it looks like it was relatively smooth sailing. But beneath the surface there has been plenty of chop and upheaval.

To wit, the Russell 2000 Index experienced a full -10% correction mid-month. And plenty of stocks saw sharp selloffs in reaction to their earnings announcement. Some of them looked warranted, others bewildering. For a fund with a keen dedication to managing risk, choppy environments can make for difficult performance, and the type of market leaders emerging from solid breakouts have been few and far between lately.

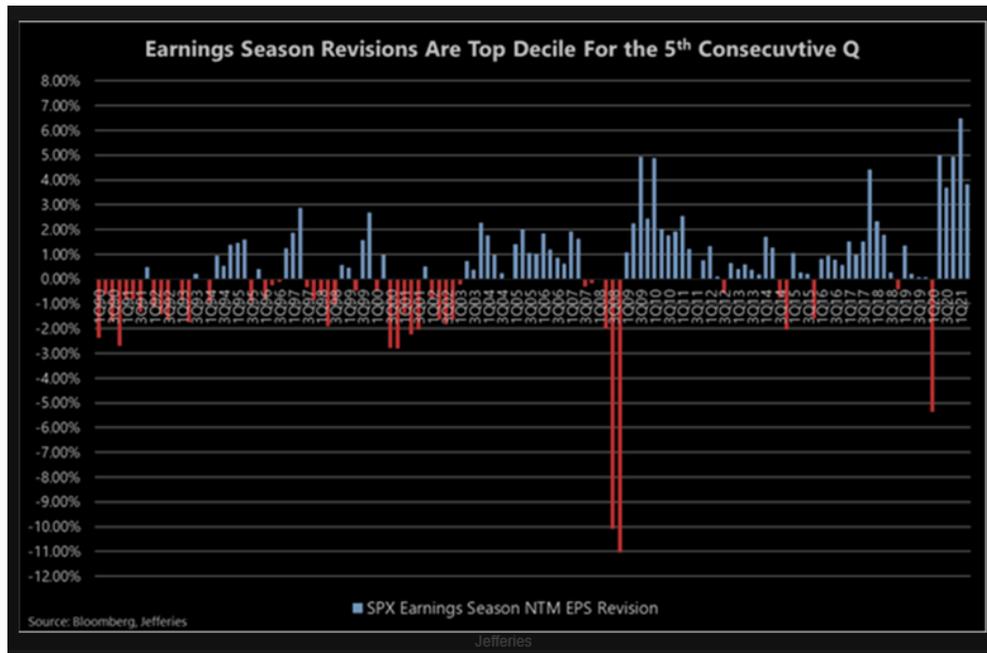

Past performance does not guarantee future results

But such is often the case in the dog days of summer, and with very solid earnings results in this latest quarterly reporting season combined with a still strong economy and tons of liquidity. We would not be surprised at all to see the action in leading stocks yield to a more fruitful environment as we head into fall. Lots of stocks that have been mired in corrections could emerge from their consolidations and offer attractive opportunities.

The recent market backdrop has also been marked by some trepidation on the part of investors due to all the headlines about the “delta variant” and the possibility for increased economic restrictions that could impede the economic recovery. That seems to be the takeaway if you look at the price action of many of the so-called recovery stocks. Although other areas, like materials and financials, are beginning to strengthen and give hope to the narrative that growth is not peaking.

We mentioned that earnings results have been very strong, and so have upward revisions to forward earnings estimates. The chart below shows just how strong this trend has been. And since underlying corporate profits are the ultimate driver of stocks, we remain optimistic that the trends supporting this market will continue to provide ample tailwinds in the intermediate-term.

The **ACM Dynamic Opportunity Fund (ADOIX)** returned -0.76% in July, trailing the benchmark HFRX Index which returned +0.46% last month. YTD ADOIX has returned +6.45% vs. the HFRX which has returned +8.36%. Leading contributors came from auto stocks, semis, and FAANG names. Laggards were financials and specialty retail.

Our *dynamic hedge model* entered the month targeting 100% market exposure. It pulled back to just 60% net exposure mid-month, but bounced back by the end of the month and finished at the 90% exposure level.

Sincerely,

Jordan L. Kahn, CFA
Chief Investment Officer

ACM Dynamic Opportunity Fund

Defined Terms: S&P 500 Index- The S&P 500 index is an unmanaged composite of large capitalization companies. This index is widely used by professional investors as a performance benchmark for large-cap stocks. HFRX Equity Hedge Index– tracks strategies that maintain positions both long and short in primarily equity and equity driven securities. Morningstar Long/Short Equity Category- A composite of returns produced by Morningstar which can be used to compare the returns of other mutual funds in the same category. Long– the holder of the position owns the security and will profit if the price of the security goes up. Short-Short selling is the sale of a security that is not owned by the seller, or that the seller has borrowed. Short selling is motivated by the belief that a security's price will decline, enabling it to be bought back at a lower price to make a profit. Derivative hedge – transaction that limits investment risk with the use of derivatives such as option contracts.

Investors are not able to invest directly in the indices referenced and unmanaged index returns do not reflect any fees, expenses or sales charges. For current performance information, please visit our performance page: <http://acm-funds.com/dynamic-fund-performance/>

There is no guarantee that any investment strategy will achieve its objectives, generate profits or avoid losses.

ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards.

Investors should carefully consider the investment objectives, risks, charges and expenses of the ACM Dynamic Opportunity Fund. Investments in mutual funds involve risks. Performance is historic and does not guarantee future results. Investment principal value will fluctuate so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month end performance information or the Fund's prospectus please call the Fund at 1-844-798-3833. You can also obtain a prospectus at www.ACM-funds.com.

The fund's maximum sales charges for Class "A" shares is 5.75%. Gross expense ratios are 2.07% for Class A shares and 1.82% for Class I Shares. The Adviser has contractually agreed to reduce its fees and reimburse expenses of the Fund, at least Until April 30, 2022, to ensure that the net annual fund operating expenses will not exceed 2.40% for Class A shares and 2.15% for Class I shares.

These fee waivers and expense reimbursements are subject to possible recoupment from each Fund within three years after the fees have been waived or reimbursed. You should be aware that the Fund's past performance (before and after taxes) may not be an indication of how the Fund will perform in the future. Although Class A Shares would have similar returns to Class I shares because the classes are invested in the same portfolio of securities, the returns for Class A shares are different from Class I shares because Class A shares have different expenses than Class I shares. Updated performance information is available at no cost by visiting www.ACM-funds.com or by calling 1-844-798-3833. Actual Total Annual Operating Expenses of 1.95% for Class A and 1.70% for Class I from the prospectus.

Investors should carefully consider the investment objectives, risks, charges and expenses of the ACM Dynamic Opportunity Fund. This and other important information about the Fund is contained in the prospectus, which can be obtained by calling 1-844-798-3833. The prospectus should be read carefully before investing. The ACM Dynamic Opportunity Fund is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Northern Lights Distributors, LLC and Ascendant Capital Management, LLC are not affiliated.

Mutual Funds involve risk including possible loss of principal. Adverse changes in currency exchange rates may erode or reverse any potential gains from the Fund's investments. ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. Investments in underlying funds that own small and mid-capitalization companies may be more vulnerable than larger, more established organizations. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Investments in foreign securities could subject the Fund to greater risks including currency fluctuation, economic conditions, and different governmental and accounting standards. In addition to the risks generally associated with investing in securities of foreign companies, countries with emerging markets also may have relatively unstable governments, social and legal systems that do not protect shareholders, economies based on only a few industries, and securities markets that trade a small number of issues.

Investors bear the risk that the Fund may not be able to implement its investment strategies or attract sufficient assets. Purchased put options may decline in value or expire worthless and may have imperfect correlation to the value of the Fund's portfolio securities. Written call and put options may limit the Fund's participation in equity market gains and may amplify losses in market declines. The Fund's losses are potentially large in a written put or call transaction. If unhedged, written calls expose the Fund to potentially unlimited losses. The Fund will incur a loss as a result of a short position if the price of the short position instrument increases in value between the date of the short position sale and the date on which an offsetting position is purchased. Short positions may be considered speculative transactions and involve special risks, including greater reliance on the ability to accurately anticipate the future value of a security or instrument. The Fund's losses are potentially large in a short position transaction.

Price to Earnings (P/E) is a valuation ratio of a company's current share price compared to its per share earnings. Gross Long and Short Exposure is the percentage in securities that are expected to rise and decline, respectively. Beta is a measure of systemic risk. Standard Deviation is a statistical measurement. It sheds light on the historical volatility of that investment. The greater the standard deviation of a security, the greater the variance between each price and the mean, indicating a larger price range. Treynor ratio – A performance metric for determining how much excess return was generated for each unit of risk taken on by a portfolio. HFRX Equity Hedge Index – tracks strategies that maintain positions both long and short in primarily equity and equity driven securities. S&P 500 Index – tracks 500 individual stocks chosen for market size, liquidity and industry grouping, among other factors.

Investors are not able to invest directly in the indices referenced in this illustration and unmanaged index returns do not reflect any fees, expenses or sales charges.
