

The bond market enjoyed a bit of a reprieve in January from last year's incessant downtrend. The biggest tailwind for the market was the downtrend in bond yields, as seen in the chart below of the 10-year Treasury yield. Yields peaked exactly on 12/30/22 and started heading lower as soon as the New Year began. It was a pretty big move too. Bond yields started the year at 3.88% and fell roughly -13% to 3.38% before bouncing a bit into month-end and finishing the month of January at 3.53%

This lifted the lead blanked off of the fixed income market and allowed nearly every sub-sector to rally. Interest-rate sensitive investments rallied the most, led by treasuries, munis, and preferreds. But credit sensitive areas such as corporates, high yield, and emerging market bonds also fared well. The Fund came into the year somewhat defensive, with nearly 50% in cash due to the technical positions of many of the sectors ending 2022. But as the new uptrends emerged and gained strength, we continued to put money to work and whittle down cash.

Past performance does not guarantee future results.

Of course, the yield curve is still highly inverted, and the Fed is still hiking interest rates and reducing its balance sheet (QT). So we don't anticipate it being all smooth sailing from here. But for the first time in many years, we are now able to find sectors to invest in with yields anywhere from 6-10%. That's a big change for income investors, and the prospect of capturing those attractive yields has us more excited than we have been in years.

We will continue to allocate to those sectors able to sustain uptrends, and as always will exit downtrending sectors and move to cash should the need to again become more defensive arise. Protecting capital is always paramount to our strategy, but we remain hopeful that 2023 could turn out to be a very good year for income-seeking investors.

ACM Tactical Income Fund

Monthly Commentary

January 2023

The **ACM Tactical Income Fund** (TINIX) had been in defensive mode for most of 2022. But recent cash levels are lower than they have been in many months. This also helps the Fund payout a higher monthly distribution. The Fund returned +2.21% in January versus the AGG Index which returned +3.08%. Last year the Fund outpaced the AGG by a wide margin.

We want to thank all of you for your continued support.

Sincerely,

*Jordan L. Kahn, CFA
Chief Investment Officer*

Investments in mutual funds involve risks. Performance is historic and does not guarantee future results. Investment principal value will fluctuate with changing market conditions so that when redeemed, shares may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month end performance information or the Fund's prospectus please call the fund at 1-844-798-3833. You can also obtain a prospectus at www.ACM-funds.com.

The fund's maximum sales charges for Class "A" shares is 5.75%. Actual Total Annual Fund Operating Expenses are 3.03% for Class A and 2.78% for Class I shares. The adviser has contractually agreed to reduce its fees and reimburse expenses of the Fund, at least until April 30, 2023, to ensure that the net annual fund operating expenses will not exceed 2.25% for Class A shares and 2.00% for Class I shares, subject to possible recoupment from the Fund in future years.

Please review the fund's prospectus for more information regarding the fund's fees and expenses. For performance information current to the most recent month-end, please call toll-free 1-844-798-3833.

Sector Weightings

As of 1/31/2023

There is no assurance that the Fund will achieve its investment objectives.

Investors should carefully consider the investment objectives, risks, charges and expenses of the ACM Tactical Income Fund. This and other important information about the Fund is contained in the prospectus, which can be obtained by calling 1-844-798-3833. The prospectus should be read carefully before investing. The Tactical Income Fund is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Northern Lights Distributors, LLC and ACM Funds, LLC are not affiliated.

Mutual funds involve risk including possible loss of principal. Adverse changes in currency exchange rates may erode or reverse any potential gains from the Fund's Investments. ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. Investments in underlying funds that own small and mid-capitalization companies may be more vulnerable than larger, more established organizations. Derivative instruments involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. In addition to the risks generally associated with investing in securities of foreign companies, countries with emerging markets also may have relatively unstable governments, social and legal systems that do not protect shareholders, economies based on only a few industries, and securities markets that trade a small number of issues.

Investors bear the risk that the Fund may not be able to implement its investments strategies or attract sufficient assets. Purchased put options may decline in value or expire worthless and may have imperfect correlation to the value of the Fund's portfolio securities. Written call and put options may limit the Fund's participation in equity market gains and may amplify losses in market declines. The Fund's losses are potentially large in a written put or call transaction. If unhedged, written calls expose the Fund to potentially unlimited losses. The Fund will incur a loss as a result of a short position if price of the short position instrument increases in value between the date of the short position sale and the date on which an offsetting position is purchase. Short positions may be considered speculative transactions and involve special risks, including greater reliance on the ability to accurately anticipate the future value of a security of instrument. The Fund's losses are potentially large in a short position transaction.

Beta is a measure of systemic risk. **Standard Deviation** is a statistical measurement. It sheds light on the historical volatility of that investment. The greater the standard deviation of a security, the greater the variance between each price and the mean, indicating a larger price range.

The **Bloomberg U.S. Aggregate Bond Index** is an unmanaged, fixed income, market-value-weighted index generally representative of investment grade fixed-rate debt issues, including government, corporate, asset-backed, and mortgage-backed securities with maturities of at least one year. The Bloomberg U.S. Aggregate Bond Index figures do not reflect any fees, expenses, or taxes. An investor cannot invest directly in an index.
